Education

Dr. B.R. Ambedkar National Institute of Technology — Jalandhar, India
Bachelor of Technology in Information Technology | Current CGPA: 8.12 / 10 — ***Aug 2024 – Present***

Experience

Hariko — Remote
Website Testing Intern — ***Jun 2026 – Jul 2026***

- Performed **end-to-end QA** for an AI-powered e-commerce platform spanning payments, orders, authentication, inventory, and analytics.
- Reported **50+ reproducible defects**, including **8+ critical** issues, with structured bug reports.
- Verified bug fixes and feature releases through systematic regression testing across multiple release cycles.

Projects

SAABDOORS Platform | *React, TypeScript, Tailwind CSS, Framer Motion* | Live — ***Apr 2026 – Present***

- Built a **production-ready platform** for an Australian premium door solutions, integrating a product catalog, showcase, and a **Quote Estimator** with structured WhatsApp inquiry briefs for leads.
- Optimized rendering, code delivery, and media assets, reducing **LCP** from **4.5s to 1.2s**.
- Implemented a **mobile-first** experience achieving **100 Accessibility**, **100 SEO**, and **0.00 CLS** while maintaining responsive performance across devices.

Winder | *Raycast, TypeScript, Python, Gemini Embeddings, ChromaDB* | GitHub — ***Mar 2026 – Jun 2026***

- Built a **multimodal desktop search** engine using Gemini embeddings and ChromaDB for semantic retrieval across documents, media, and source code.
- Architected a **hybrid BM25 + vector search** pipeline with Reciprocal Rank Fusion (**RRF**), improving **Recall@10 by 15%** and **MRR by 12%** over BM25.
- Designed and evaluated a 50-query retrieval benchmark, showing BM25 alone fully resolved **80% of searches** and motivating adaptive semantic routing.

RogNidhi | *React, TypeScript, FAISS, Nvidia OCR, LLMs* | GitHub — ***28 – 29 Mar 2026***

- Unified heterogeneous medical records per patient into structured timelines, achieving **99%+ extraction reliability** via a **multi-LLM fallback architecture** (Gemini 2.5 + Llama 3).
- Architected a **4-stage cRAG pipeline** using Nvidia OCR, FAISS, and LLMs to process noisy medical scans and generate contextual clinical insights in **under 5s** (95% reduction).
- Reduced AI inference costs **by 80%** via tiered model routing while implementing secure **RBAC-based** patient-doctor access control and real-time health trend visualization.

Technical Skills

Languages: Python, C++, SQL, JavaScript, TypeScript

Frontend: HTML, CSS, React, Next.js, shadcn, Tailwind CSS, Framer Motion

Backend: FastAPI, REST APIs

AIML: RAG, LangGraph, Ollama, scikit-learn, OpenCV, NumPy, Pandas, Matplotlib

Database & Data: Firebase, MongoDB, Supabase, FAISS, ChromaDB, SQLite

Tools & Infrastructure: Git, Github, Vercel, Render, Postman, Raycast, Google Colab

Core Concepts: DSA, OOPS, DBMS, OS, CN, CSA

Achievements & Interests

- HackMol 7.0 Finalist: Selected out of 50+ teams
- Solved 300+ LeetCode problems with current rating of 1450+
- Photography and cinematic color grading
